

## THE LEINCO LATEST

### NEW MABMODS™ ANTIBODIES

Our mAbMods™ chimeric anti-mouse PD1 and PD-L1 recombinant antibodies are here! These antibodies are the first in a line of mouse anti-mouse antibodies to be launched in the coming months. They are designed to mitigate the immunogenicity problems associated with the use of antibodies from other species such as rat or hamster in experiments using mouse models, particularly during prolonged use.

### NEW RECOMBINANT PROTEINS

Proteins are the life blood of the world, and Leinco Technologies has built a reputation on being able to provide researchers with biologically active recombinant proteins from a variety of host cells. We are excited to announce the following new Recombinant Proteins are now available!

- Human APOE2
- Human APOE3
- Human APOE4
- Influenza A HA
- Influenza A (NP)
- Influenza B (NP)
- Human EGFR

### NEW MATCHED PAIR INFECTIOUS DISEASE ANTIBODIES

The development of in vitro diagnostics (IVD) kits based on immunoassays, such as lateral flow tests (LFT) and enzyme-linked immunosorbent assay (ELISA) relies on the availability of matched pairs of high-quality antibodies to capture and detect target analytes. It can be a challenge to find “off the shelf” and “validated” antibody pairs with the high sensitivity, specificity, purity, and stability needed to ensure an IVD kit meets performance requirements. We have taken the guesswork out of finding validated antibodies for diagnostic raw materials offering only the best validated pairs.
